## SUMMARY

AI-native full-stack engineer with 2 years of experience building web applications in TypeScript, Node.js and Next.js. I have shipped marketplaces, payment systems and AI products that businesses use every day, and I build with coding agents every day.

## EXPERIENCE

### Zenkoders

Oct 2024 – Present

*Software Engineer (TypeScript, Node.js and Next.js)*

Karachi

- Led the build of Numlix, an SMS number marketplace, using Next.js and Supabase. Built the wallet, payments, refunds and admin panel, and cut the slowest database query from 29 seconds to 0.5 seconds.
- Built the backend from scratch for an AI email assistant at a healthcare consultancy. It classifies incoming emails, matches the client in the CRM and drafts replies for consultants who each handle about 1,000 clients and 40–50 emails a day.
- Made email processing crash-safe so no email is handled or sent twice. Validated every AI draft and added a consultant approval step before any reply goes out.
- Built an AI lead calling flow where a voice agent calls new leads, sends a follow-up SMS and books a meeting with a sales rep. Reworked rep assignment so meetings are distributed evenly. It handles 7,000 inbound leads a month and books 31 to 49 meetings a week from SMS follow-up.
- Built an R&D tax intake chatbot that checks eligibility and uses AI to categorize financial accounts from uploaded spreadsheets for accountant review. Wrote the data processing in Python.
- Led a team of five on a property management app. Moved all billing to Stripe in 10 phases, closed gaps where one company could read another company's data, and built an emergency phone line that connects tenants to an AI voice agent.
- Building MyCFO solo, a personal finance app for people with a salary plus freelance income. Took it from a prototype to the real product: Plaid bank links, sorting money into business, personal, transfer and tax, AI category suggestions, and Stripe subscriptions.
- Built admin dashboards, login, onboarding and settings pages in React and Next.js. Set up automated deployments to AWS and Vercel.
- Built backends for Mach 1, a healthcare credentialing app with document upload and nurse licence checks, and Voxena, a restaurant phone assistant that speaks English, French and Dutch.

## TECHNICAL SKILLS

**Languages:** TypeScript, JavaScript, Python, SQL

**Frameworks:** React, Next.js, Node.js, NestJS, FastAPI, Tailwind CSS, TanStack Query, Zustand

**Data & Cloud:** PostgreSQL, Supabase, Prisma, Drizzle, Redis, AWS, Docker, GitHub Actions, Vercel

**AI & Integrations:** OpenAI, LangChain, Vapi, RAG, Stripe, Plaid, Twilio, Pipedrive, Google APIs, WebSockets

**Developer Tools:** Git, Claude Code, Cursor

## PROJECTS

**@zireal/result-kit** | *Open-source TypeScript library on npm*

- Built a small library for handling errors without try/catch, with test and lint helpers. I use it in most projects.

**Billy's Garage** | *Garage management app for UK garages, client project, solo backend*

- Built the backend using NestJS, Drizzle and PostgreSQL to manage jobs, estimates, stock and online bookings.

## EDUCATION

**DHA Suffa University**

*Bachelor of Science in Computer Software Engineering*

Oct 2020 – Jul 2024

Karachi, Pakistan
